EAGLE EYE™

UV/White Light LED Inspection Lamp Kit

(U.S. patent: 8,616,722; CN patent ZL201010265212.4)

The EagleEye™ is a palm-sized, cool-running, lightweight lamp featuring two ultra-high intensity UV LEDs for fluorescent leak detection, plus a three-LED white light assembly for illuminating dark work areas. This versatile lamp can be hand-held or it can be worn on a hard hat or directly on the head for complete hands-free operation. It's ideal for locating leaks in cramped or hard-to-reach areas where the use of standard leak detection lamps is difficult.

- ✓ Power comparable to high-intensity 100-watt lamps
- ✓ Inspection range of up to 12 feet (3.6 m)
- ✓ Adjustable strap allows lamp to be worn on a hard hat or directly on the head for complete hands-free operation!
- ✓ Works with all oil- and water-based fluorescent dyes. Especially effective on difficult-to-fluoresce yellow, white and blue dyes, even in dirty fluids.
- ✓ Built-in fan keeps LEDs cool to maintain optimum intensity during extended use
- ✓ 100,000-hour LED service life
- ✓ Powered by one rechargeable lithium-ion battery, with two spare batteries included in the kit. Each provides up to 75 minutes of continuous inspection between charges.

The **EK-365 EagleEye™ Kit** comes complete with the lamp, a lanyard, an adjustable head strap, three splash guards with integral particulate filters, three rechargeable batteries, charging cradle with AC and DC cord sets, UV-absorbing spectacles and a soft carrying case.
